

TRANSFORMING PRECISION ENGINEERING WITH CUSTOM JOB MANAGEMENT SOFTWARE: A CASE STUDY WITH SUMMERS ENGINEERING

Facile Technolab Pvt Ltd has built a web-based app for a precision components manufacturer. This involves designing and wireframe review, database design, software build, and ongoing maintenance.

BUSINESS CASE

Summers Engineering, a leading manufacturer of precision components and assemblies, aimed to streamline their operations and enhance productivity through the development of custom Job Management Software. The primary objectives were to optimize internal processes, manage software post-launch, and leverage software development resources effectively.

THE CHALLENGES

Summers Engineering faced several challenges in achieving their goals:

- **Software Expertise:** Developing a web-based application with specific functionalities required specialized software development expertise.
- **Efficient Project Management:** Ensuring smooth coordination, timely delivery, and effective communication during the development process was crucial.
- **Scalability:** The software needed to be scalable to accommodate future growth and additional users.
- **Seamless Integration:** Integrating the new software with existing systems and processes demanded careful planning and execution.

SOLUTION

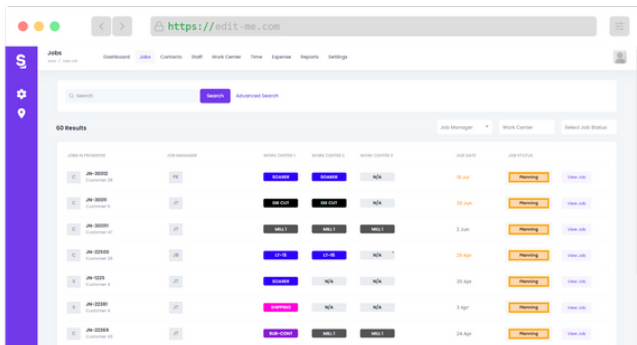

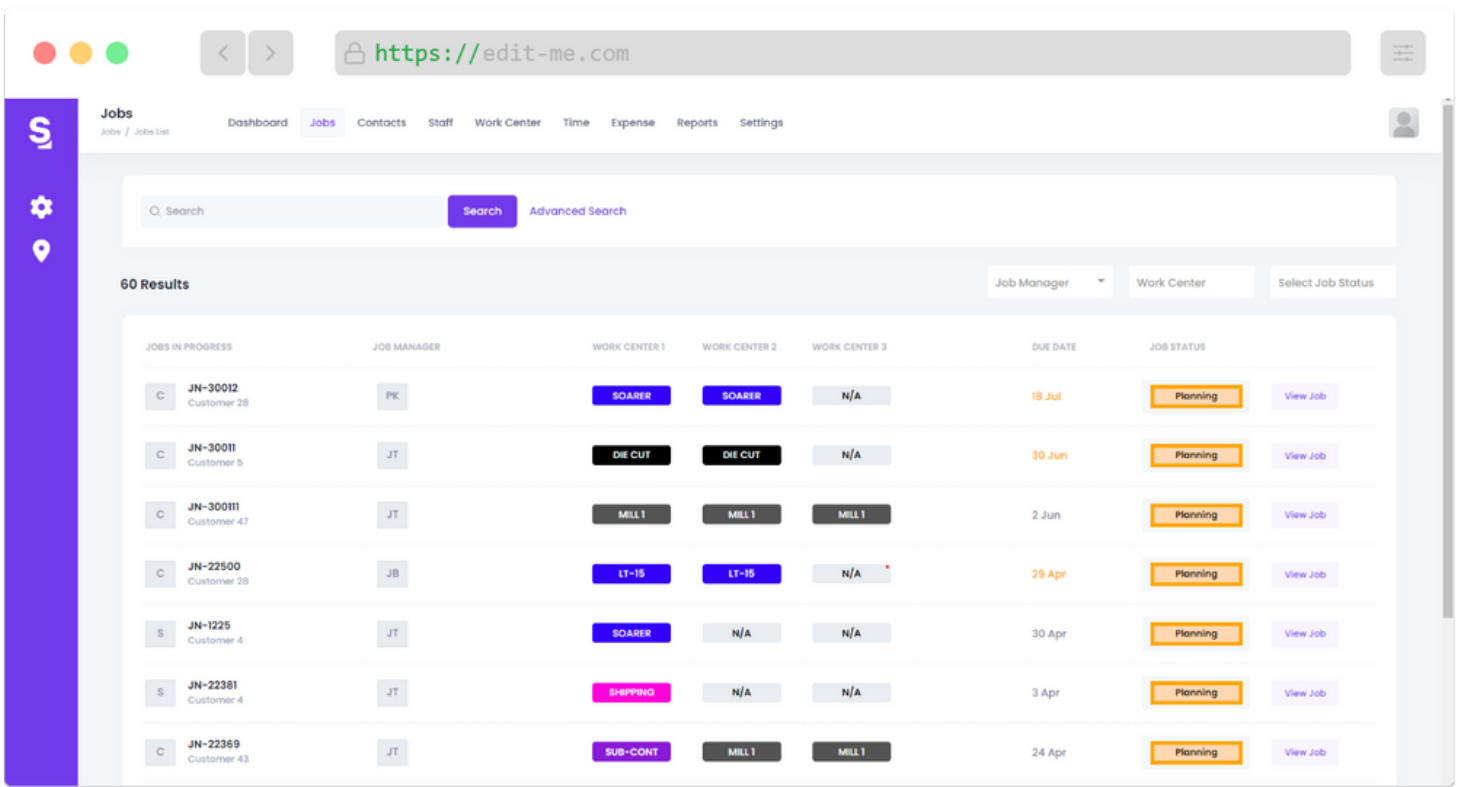

Facile Technolab Pvt Ltd was chosen as the preferred partner due to their high ratings, alignment with company values, and competitive pricing. With a team of 2-5 skilled professionals, Facile Technolab took a collaborative approach to address the challenges:

- **Discovery Phase:** The team thoroughly reviewed detailed mockups and wireframes, ensuring a comprehensive understanding of the application layout and user experience.
- **Agile Project Management:** Using Jira and Miro, Facile Technolab meticulously planned and executed the development process, adhering to timelines and milestones.
- **Cloud Infrastructure:** A robust development and production environment was set up on AWS to facilitate seamless scalability and data security.
- **Custom Software Development:** Expert developers at Facile Technolab crafted the software code, ensuring a high-quality and user-friendly web application.
- **Thorough Testing:** Rigorous testing and quality assurance were performed in a development environment before proceeding to User Acceptance Testing.
- **Ongoing Support:** A maintenance and support plan was established to address future updates, bug fixes, and customer support.

The screenshot displays a web application interface for job management. The top navigation bar includes 'Jobs', 'Dashboard', 'Jobs', 'Contacts', 'Staff', 'Work Center', 'Time', 'Expense', 'Reports', and 'Settings'. A search bar is located below the navigation. The main content area is a grid of job cards, each representing a different job. Each card contains the following information:

- Job ID:** A unique identifier for the job.
- Customer:** The name of the customer.
- PO:** Purchase Order number.
- P/N:** Part Number.
- Due:** Due date.
- RUNG:** Run time.
- Des.:** Description of the job.
- Status:** A color-coded status indicator (e.g., 'Arrived - To...', 'On Hold', 'On Order', 'Ready To S...', 'In Progress', 'To Order', 'Stock Mate', 'Customer...').

The job cards are organized into columns based on work centers, with headers like 'LB3000', 'SOARER', 'LB300', 'LT-15', 'LB200', and 'STAR'. Each card also shows a search bar and a 'Filter Work Center' dropdown.

RESULT

The collaboration with Facile Technolab proved highly successful, resulting in tangible outcomes:

- **Increased Efficiency:** The custom Job Management Software streamlined internal processes, optimizing task allocation and resource utilization.
- **User Adoption:** More than 20 individuals now use the software daily, testifying to its quality and user-friendliness.
- **Continuous Improvement:** Facile Technolab remains engaged for additional software improvements and developments, ensuring a dynamic and evolving solution.
- **Effective Project Management:** Daily updates and proactive communication from the Facile team facilitated transparency and ensured timely delivery.
- **Stable Performance:** The software demonstrated exceptional stability and reliability after launch, contributing to uninterrupted operations at Summers Engineering.

TECH USED

- Angular
- ASP.NET Core MVC
- ASP.NET Web APIs
- PostgreSQL
- Entity Framework
- AWS ECS
